

## **Windows XP Service Pack 2**

**Microsoft has released its latest software patch for Windows XP called Service Pack 2. It has a lot of new features and security fixes one of which is a built in pop up blocker. When the pop up blocker is turned on it will prevent you from viewing USF&G documents when trying to generate a quote.**

**The pop up blocker will need to be disabled for you to view and print the USF&G documents. You can disable the pop up blocker by opening your browser (internet explorer) and going to Tools, pop up blocker. You can turn off the feature there.**
